

Enviro Clean Grout & Stone Care Inc.

restores the beauty in your stone, ceramic floors

Stone and ceramic tile floors are in ever-increasing demand as attractive and durable elements in new homes and renovation projects. People are drawn to the natural beauty and high quality of these long-wearing tiles.

Yes, your stone or ceramic tile floor will endure for a lifetime. But it will only maintain its true beauty if you provide the care and cleaning it needs. Maintaining normal grout surfaces is not easy. Grout is a sponge for oil, food or beverage stains and it becomes difficult to clean.

Proper treatment and sealing will lead to easier maintenance, protecting your floors and ultimately adding value to your home.

That is where the special products, training and equipment of Enviro Clean Grout & Stone Care Inc. can help. The locally owned and operated company was started three years ago by Sue Ostrowski and Mary Fadi, who had been working in the field of renovations and had noticed a need for this specialty service. Enviro Clean has become recognized as the #1 choice for worry-free grout and stone restoration. They are confident that homeowners will be happy and satisfied when the job is done.

"Our customers are always impressed and surprised when they see the big difference in their floors," says Sue.

Enviro Clean starts by deep-cleaning the grout to remove impurities, dirt and grime; this prepares the surface for our treatment - our two-in-one product is a colour with a long-term sealer. "We've talked to families that make grout cleaning an annual priority. They may spend up to \$80 or \$90 for a gallon of the chemical, use lots of elbow grease and most of a weekend is wasted; usually it looks fantastic for a month or so. People want to spend time with their families, camping or golfing, not cleaning grout."

Enviro Cleans' treatment provides uniform grout colour with the additional bonus of a remarkable seal. No smell, no dust and no odour, you can walk on your floor in a few hours and it lasts for many years.

Many clients don't even realize that the grout can be dyed. If your grout looks blotchy or uneven or if the colour shade is incorrect, it's not a problem - you can select from over 200 colours. Benefit from the correct colour with uniformity.

Newly installed floors may not have been sealed. Applying this type of treatment prior to moving in provides easier maintenance, years of great-looking tile floors and maintains the value of your home.

A very important part of the tile business, and one that's growing by leaps and bounds, is the installation of stone. It's not just new homes that boast marble, travertine or limestone; it's becoming very common. Many renovation projects are adding stone floors and showers as glamorous and elegant upgrades.

"Homeowners with stone floors often believe that stone just needs cleaning, but it really needs additional care and may need to be restored because of etches and scratches in the natural surface. Enviro Clean uses a number of restoration techniques to remove imperfections and restore the surface to a honed or polished finish."

Even in a newer home, where the installer's clean-up procedures may have been lacking, a haze will be left on the marble or stone. "Some tile stores hire us to clean up and finish the floors, so there's a real 'wow' impact when the homeowner walks through the door."

Enviro Clean Grout & Stone Care Inc. takes pride in a job well done, and leaving the homeowner with floors they can be proud of. They'll also leave behind some guidance in maintaining that newly restored lustre to keep your floors looking great for countless years.

With a solid reputation established on a foundation of quality workmanship, Enviro Clean Grout & Stone Care Inc. has grown steadily over the past three years through customer referrals and word-of-mouth advertising.
